Art Unit: 2614

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 10-16, drawn to motion artifact detection (and prevention of false artifact detection) of an interfaced signal, classified in class 348, subclass 701.
- II. Claims 6-9, drawn to boosting frequency detection values in low contrast and brightness signal areas, classified in class 348, subclass 673.
- III. Claim 17, drawn to reducing of interlaced motion artifacts, classified in class 348, subclass 607.
- 1. The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as detection of motion artifacts regardless of a concern for low contrast and brightness areas. Alternatively, boosting detection values in low contrast/brightness areas does not require attention to interlace artifacts. See MPEP § 806.05(d)

2. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as just detecting motion artifacts without a concern for reducing the artifacts. See MPEP § 806.05(d).

Application/Control Number: 09/941,949

Art Unit: 2614

3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as boosting detection values in low contrast/brightness areas does not require reduction of interlace artifacts. See MPEP § 806.05(d).

Page 3

- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, because of their recognized divergent subject matter, and because the individual searches required for Groups, I, II and II are not required for the other two groups, restriction for examination purposes as indicated is proper.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor R. Kostak whose telephone number is 703 305-4374. The examiner can normally be reached on Monday Friday from 6:30am-3:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Miller can be reached on 703 305-4795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 09/941,949

Art Unit: 2614

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

Or faxed to:

(703) 872-9306 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 308-HELP.

Victor R. Kostak

Primary Examiner
